

EPA School Air Monitoring Initiative: Presented by ENVIRON and Jackson Walker LLP

JOIN ENVIRON AND JACKSON WALKER LLP

Please join us for a presentation on the EPA School Air Toxics Monitoring Initiative.

The Environmental Protection Agency (EPA) has begun a program of air quality monitoring at schools to assess whether outdoor toxic air pollution poses health concerns to schoolchildren. EPA selected schools for monitoring based on several factors, including results from EPA computer modeling analysis, an analysis conducted for a recent newspaper series on air toxics at schools and specific pollution sources near these schools. EPA has selected seven schools in Texas, four of which are located in the Houston area.

Who should attend?

This seminar will be especially relevant for corporate environmental, health and safety (EHS) managers and in-house legal counsel with responsibilities for facilities with discharges to the atmosphere.

Topics include:

- An introduction to EPA's program and how it may draw attention to specific facilities or industries;
- Strategic and legal aspects of assessing your position vis-à-vis EPA's efforts; and
- Proactive steps that can be taken by industrial facilities to counter any potential findings by the EPA.

Speakers

Program speakers include John F. Wojciak, PhD, PE and Christopher J. Colville, PE, who lead ENVIRON's Houston environmental regulatory compliance practice, and Peter K. Wahl, a partner in Jackson Walker's environmental and legislative practice.

When

Thursday, September 10

7:30 to 8:00 am – Registration & Complimentary Breakfast

8:00 to 9:00 am – Presentation
